PT	New isolated cytokine, Lerk-8 - binds to the hek and elk receptor	
PT	tyrosine kinases, used to develop products for diagnosis and therapy.	
XX		
PS	Claim 3; Page 32-33; 37pp; English.	
XX		
CC	This protein sequence comprises a novel human cytokine designated Lerk-8.	
CC	The amino acid sequence was deduced from a human foetal brain cDNA clone	
CC	(see AAT89519). Lerk-8 binds to the cell surface receptors hek and elk,	
CC	which are members of the eph/elk family of receptor tyrosine kinases.	
CC	Lerk-8 polypeptides, especially soluble polypeptides comprising amino	
CC	acid residues -27 to 142-197 of the full-length protein, can be expressed	
CC	in transformed host cells. These polypeptides can be used to purify hek	
CC	or elk proteins, and to purify or identify cells that express hek or elk	
CC	on the surface. Such cells can be used in various in vitro studies or in	
CC	vivo procedures, e.g. neural cells expressing elk can be administered to	
CC	a mammal afflicted with a neurodegenerative disorder. The Lerk-8	
CC	polypeptides can also be used to deliver diagnostic or therapeutic agents	
CC	to these cells (e.g. leukaemia cells). The Lerk-8 DNA and polypeptides	
CC	can also be used to: treat disorders mediated by defective or	
CC	insufficient amounts of Lerk-8; to treat disorders such as injury to	
CC	neural tissue or neurologic disease; to promote angiogenesis; and for	
CC	wound healing or stimulating neovascularisation of grafted tissues

 PT Human AL-2 neurotrophic factor and related DNA - used to develop products
 PT for, e.g. treating neurologic disorders, angiogenesis disorders, tumours
 PT or rheumatoid arthritis or for wound healing.
 XX
 PS Claim 20; Fig 2A-B; 86pp; English.
 XX
 CC This is a AL-2-short (AL-2s) protein. The AL-2 is a novel Eph-related
 CC tyrosine kinase receptor ligand. AL-2 can be administered to patients in
 CC whom the nervous system has been damaged by trauma, surgery, stroke,
 CC ischaemia, infection, metabolic disease, nutritional deficiency,
 CC malignancy, or toxic agents, to promote the survival or growth of
 CC neurons. They can be used to treat motoneuron disorders such as
 CC amyotrophic lateral sclerosis (Lou Gehrig's disease), Bell's palsy, and
 CC various conditions involving spinal muscular atrophy, or paralysis. AL-2
 CC can be used to treat human neurodegenerative disorders, such as
 CC Alzheimer's disease, Parkinson's disease, epilepsy, demyelinating
 CC diseases such as multiple sclerosis, Huntingtons chorea, Down's syndrome,
 CC nerve deafness, Menier's disease, and other disorders of the cerebellum.
 CC AL-2 can be used as cognitive enhancer, to enhance learning particularly
 CC in dementias or trauma, since they can promote axonal outgrowth and
 CC synaptic plasticity, particularly of hippocampal neurons that express AL-
 CC 2 binding Eph-family receptors and cortical neurons that express AL-2. AL-
 CC -2 can also be used for wound healing, i.e. accelerating
 CC neovascularisation of, e.g. burns and ulcers. The encoding nucleic acids
 CC are useful in preparing antibodies that specifically bind to the AL-2
 CC protein. The antibodies and the AL-2 antagonists are useful in diagnosing
 CC and treating various neuronal disorders. AL-2 antagonists can be used for
 CC modulating angiogenesis. They can also be used for the treatment of
 CC tumours, acute myeloid leukaemia (AML), chronic myeloid leukaemia (CML),
 CC myelodysplastic syndrome (MDS), diabetic retinopathy, neovascular
 CC glaucoma, psoriasis and rheumatoid arthritis

 PT and differentiation.
 XX
 PS Claim 16; Page 37-39; 71pp; English.
 XX
 CC A novel human ligand for eph-related kinase (LERK) is designated NLERK2
 CC (AAW10637). It is encoded by a cDNA clone (AAT60966) obtd. from a human
 CC foetal brain cDNA library. The novel receptor ligand can be expressed in
 CC transformed host cells and used in methods for regulating the
 CC development, maintenance or regeneration of different cells (e.g.
 CC neurons) and tissues in vivo and in vitro. Soluble NLERK2 peptides can be
 CC used to treat injury, disease or abnormality in the nervous system, and
 CC membrane-bound NLERK2 to modulate proliferation, different or survival
 CC e.g. in grafting procedures or transplantation. NLERK2 can also be used
 CC to raise antibodies for use in immunotherapy, and to detect anti-NLERK2
 CC antibodies that may occur in some autoimmune diseases

 PT Identifying modulators of binding between a Tie receptor tyrosine kinase
 PT and an Ephrin ligand, useful for promoting neovascularization, comprises
 PT contacting a Tie receptor with an Ephrin in the presence of a putative
 PT modulator.
 XX
 PS Disclosure; Page 117-119; 199pp; English.
 XX
 CC The invention describes a method of identifying a modulator of binding
 CC between a Tie receptor tyrosine kinase and an Ephrin ligand. The method
 CC comprises contacting a Tie receptor composition with an Ephrin
 CC composition in the presence and in the absence of a putative modulator
 CC compound, and detecting the binding between Tie receptor and the Ephrin
 CC in the presence and in the absence of the putative modulator. The method
 CC is useful for identifying a modulator of binding between a Tie receptor
 CC tyrosine kinase and an Ephrin ligand. Modulators identified from the
 CC method are useful in modulating angiogenic processes, including
 CC lymphangiogenesis, for treating diseases associated with aberrant Ephrin-
 CC Tie biology, aberrant growth, migration or proliferation of cells that
 CC express a Tie receptor, or for promoting growth of vessel or
 CC neovascularisation (e.g. ischaemic tissue, an infarction, a new or
 CC chronic compound, or a tissue graft or transplant). This is the amino
 CC acid sequence of human Ephrin-B3, a member of the Ephrin-B subclass of
 CC ligands that are bound to the membrane via a transmembrane domain and
 CC short cytoplasmic tail and function as Eph receptor ligands

 XX
 PS Claim 2; Fig 1; 36pp; English.
 XX
 CC A novel ligand (AAW17081), designated Efl-6 (or Eph transmembrane
 CC tyrosine kinase family ligand 6), binds to the Elk, Nuk/Cek5, Hek2/Sek4,
 CC Htk and Sek1 receptors on cells. Its amino acid sequence was deduced from
 CC a human frontal cortex cDNA clone (AAT69808). Recombinant Elf-6,
 CC truncated soluble polypeptides comprising the extracellular domain of Elf
 CC -6, and Efl-6 ligandbodies comprising soluble Efl-6 and the Fc portion of
 CC IgG can be expressed in host cells. These can be used to support neuronal
 CC and other Eph receptor-bearing cell populations for treatment of
 CC neurological disorders, in drug screening and to raise diagnostic
 CC antibodies

PT Human AL-2 neurotrophic factor and related DNA - used to develop products
PT for, e.g. treating neurologic disorders, angiogenesis disorders, tumours
PT or rheumatoid arthritis or for wound healing.

XX

PS Claim 20; Fig 1A-C; 86pp; English.

XX

CC This is a AL-2-long (AL-2l) protein. The AL-2 is a novel Eph-related
CC tyrosine kinase receptor ligand. AL-2 can be administered to patients in
CC whom the nervous system has been damaged by trauma, surgery, stroke,
CC ischaemia, infection, metabolic disease, nutritional deficiency,
CC malignancy, or toxic agents, to promote the survival or growth of
CC neurons. They can be used to treat motoneuron disorders such as
CC amyotrophic lateral sclerosis (Lou Gehrig's disease), Bell's palsy, and

CC various conditions involving spinal muscular atrophy, or paralysis. AL-2
 CC can be used to treat human neurodegenerative disorders, such as
 CC Alzheimer's disease, Parkinson's disease, epilepsy, demyelinating
 CC diseases such as multiple sclerosis, Huntingtons chorea, Down's syndrome,
 CC nerve deafness, Menier's disease, and other disorders of the cerebellum.
 CC AL-2 can be used as cognitive enhancer, to enhance learning particularly
 CC in dementias or trauma, since they can promote axonal outgrowth and
 CC synaptic plasticity, particularly of hippocampal neurons that express AL-
 CC 2 binding Eph-family receptors and cortical neurons that express AL-2. AL
 CC -2 can also be used for wound healing, i.e. accelerating
 CC neovascularisation of, e.g. burns and ulcers. The encoding nucleic acids
 CC are useful in preparing antibodies that specifically bind to the AL-2
 CC protein. The antibodies and the AL-2 antagonists are useful in diagnosing
 CC and treating various neuronal disorders. AL-2 antagonists can be used for
 CC modulating angiogenesis. They can also be used for the treatment of
 CC tumours, acute myeloid leukaemia (AML), chronic myeloid leukaemia (CML),
 CC myelodysplastic syndrome (MDS), diabetic retinopathy, neovascular
 CC glaucoma, psoriasis and rheumatoid arthritis

PT Modulating transmembrane ligand for an Elk-related receptor tyrosine
PT kinase - by formation of a complex between an oligomerised Elk-related
PT receptor tyrosine kinase and a transmembrane ligand.
XX
PS Disclosure; Fig 5A; 40pp; English.
XX
CC This polypeptide comprises human Elk-L3, a transmembrane ligand of Elk-
CC related receptor tyrosine kinase (ERRTK). A novel method of modulating
CC the biological activity of, or for affecting a pathway regulated by, a
CC transmembrane ligand for an ERRTK in a cell expressing the transmembrane
CC ligand comprises forming a complex between a purified and isolated
CC oligomerised ERRTK, or an isoform or an extracellular domain of the
CC ERRTK, and the transmembrane ligand expressed on the cell. The complex
CC can also be used for evaluating a substance for its ability to modulate
CC the biological activity of a transmembrane ligand for an ERRTK, and to
CC identify substances that affect or modulate a pathway regulated by a
CC ERRTK. A purified and isolated oligomerised ERRTK can be used in the
CC preparation of a medicament for modulating neuronal development or
CC regeneration in a subject, or in a medicament for modulating axonogenesis
CC in a subject (all claimed). The substances identified by the methods can
CC be used to modulate axonogenesis, nerve cell interactions and
CC regeneration, to treat diseases and conditions involving trauma and

CC injury to the nervous system, such as Alzheimer's disease, Parkinson's
CC disease, Huntingdon's disease, demyelinating diseases, such as multiple
CC sclerosis, amyotrophic lateral sclerosis, bacterial and viral infections
CC of the nervous system, deficiency diseases, such as Wernicke's disease
CC and nutritional polyneuropathy, progressive supranuclear palsy, Shy
CC Drager's syndrome, multistem degeneration and olivo ponto cerebellar
CC atrophy, peripheral nerve damage, trauma, and ischaemia resulting from
CC stroke

 PT Identifying modulators of binding between a Tie receptor tyrosine kinase
 PT and an Ephrin ligand, useful for promoting neovascularization, comprises
 PT contacting a Tie receptor with an Ephrin in the presence of a putative
 PT modulator.
 XX
 PS Disclosure; Page 121-122; 199pp; English.
 XX
 CC The invention describes a method of identifying a modulator of binding
 CC between a Tie receptor tyrosine kinase and an Ephrin ligand. The method
 CC comprises contacting a Tie receptor composition with an Ephrin
 CC composition in the presence and in the absence of a putative modulator
 CC compound, and detecting the binding between Tie receptor and the Ephrin
 CC in the presence and in the absence of the putative modulator. The method
 CC is useful for identifying a modulator of binding between a Tie receptor
 CC tyrosine kinase and an Ephrin ligand. Modulators identified from the
 CC method are useful in modulating angiogenic processes, including
 CC lymphangiogenesis, for treating diseases associated with aberrant Ephrin-
 CC Tie biology, aberrant growth, migration or proliferation of cells that
 CC express a Tie receptor, or for promoting growth of vessel or
 CC neovascularisation (e.g. ischaemic tissue, an infarction, a new or
 CC chronic compound, or a tissue graft or transplant). This is the amino
 CC acid sequence of mouse Ephrin-B3, a member of the Ephrin-B subclass of
 CC ligands that are bound to the membrane via a transmembrane domain and
 CC short cytoplasmic tail and function as Eph receptor ligands

 PT Ligand for the hepatoma trans-membrane kinase receptor - useful for
 PT stimulating and inhibiting cells carrying the receptor, e.g. for treating
 PT neuro-degenerative disease.
 XX
 PS Claim 5; Fig 1(A-D); 88pp; English.
 XX
 CC Mouse (AAT16470) and human (AAT16471) Htk ligand which bind to, and
 CC activate, the Htk receptor, have been identified in a variety of tissues
 CC using a soluble Htk-Fc fusion protein. The predicted mol.wt. of the
 CC murine Htk ligand protein following a signal peptide cleavage is 34 kD
 CC with an estimated pI of 8.9. The murine and human ligands show 96%
 CC homology at the amino acid level. The DNA is used to produce recombinant
 CC ligands; for tissue- specific typing (partic. as a marker for breast
 CC cancer) and as a marker for human chromosome 13. The ligands (partic. in
 CC soluble form) are used to activate the tyrosine kinase domain of the Htk
 CC receptor, i.e. to stimulate or inhibit growth, differentiation, and/or
 CC activation of cells contg. the receptor, e.g. treatment of
 CC neurodegenerative diseases, since they are strongly expressed in the
 CC cerebral cortex, hippocampus, striatum and cerebellum. The ligands are
 CC also useful as a control or standard in assays, for generation of
 CC antibodies, as a mol. wt. marker, for growth in vitro of Htk-receptor
 CC positive cells, as research agent, in screening, etc

CC between a Tie receptor tyrosine kinase and an Ephrin ligand. The method

CC comprises contacting a Tie receptor composition with an Ephrin
 CC composition in the presence and in the absence of a putative modulator
 CC compound, and detecting the binding between Tie receptor and the Ephrin
 CC in the presence and in the absence of the putative modulator. The method
 CC is useful for identifying a modulator of binding between a Tie receptor
 CC tyrosine kinase and an Ephrin ligand. Modulators identified from the
 CC method are useful in modulating angiogenic processes, including
 CC lymphangiogenesis, for treating diseases associated with aberrant Ephrin-
 CC Tie biology, aberrant growth, migration or proliferation of cells that
 CC express a Tie receptor, or for promoting growth of vessel or
 CC neovascularisation (e.g. ischaemic tissue, an infarction, a new or
 CC chronic compound, or a tissue graft or transplant). This is the amino
 CC acid sequence of mouse Ephrin-B2, a member of the Ephrin-B subclass of
 CC ligands that are bound to the membrane via a transmembrane domain and
 CC short cytoplasmic tail and function as Eph receptor ligands

PT DNA coding for neurotrophic human elk ligand cytokine - useful as probe
 PT to isolate other elk ligand sequences.

XX

PS Claim 1; Col 27-30; 18pp; English.

XX

CC The present sequence is the human cytokine elk-ligand (elk-L), which
CC binds a member of the tyrosine kinase receptor family. Elk-L exhibits
CC neurotrophic and neuroprotective properties, and has a calculated mol.
CC wt. 35180 daltons and a pI of 9.006. The elk-L cDNA, isolated from a
CC human placental cDNA library, can be radiolabelled and used as a probe
CC for isolating other mammalian elk-L cDNA. Elk-L can be used to treat
CC neural tissue disorders, partic. excito-toxicity associated injuries or
CC disorders, and as a neural culture reagent, while immunogenic fragments
CC of elk-L can be used to generate specific anti-elk-L antibodies. (Updated
CC on 25-MAR-2003 to correct PF field.)

 PT Human elk ligand protein - for diagnostic or therapeutic use, e.g. as
 PT neuro-protective agent.
 XX
 PS Claim 1; Col 29-32; 18pp; English.
 XX
 CC The present sequence is a human elk ligand (elk-L) protein, which binds
 CC elk, has a calculated molecular weight of 35180 and an isoelectric point
 CC of 9.006. Elk-L is a cytokine that can be used to test cells for elk
 CC expression, measure the biological activity of elk, purify elk by
 CC affinity chromatography and as a neuroprotective agent to treat diabetic,
 CC hereditary and nutritional neuropathies and neurodegenerative diseases.
 CC It may also be added to tissue cultures to prolong the life of neurons.
 CC The elk-L cDNA was isolated from a human placental cDNA library, and is
 CC present as a cDNA insert in the recombinant vector deposited in strain
 CC ATCC 69085. (Updated on 25-MAR-2003 to correct PF field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 CC -!- FUNCTION: Binds to the receptor tyrosine kinases EPHB1 and EPHA1.
 CC Binds to, and induce the collapse of, commissural axons/growth
 CC cones in vitro. May play a role in constraining the orientation of
 CC longitudinally projecting axons (By similarity).
 CC -!- SUBUNIT: Binds GRIP1 and GRIP2.
 CC -!- SUBCELLULAR LOCATION: Type I membrane protein.
 CC -!- TISSUE SPECIFICITY: Heart, placenta, lung, liver, skeletal muscle,
 CC kidney, pancreas.
 CC -!- INDUCTION: By TNF-alpha.
 CC -!- PTM: Inducible phosphorylation of tyrosine residues in the
 CC cytoplasmic domain (By similarity).
 CC -!- SIMILARITY: Belongs to the ephrin family.

 RX MEDLINE=20171264; PubMed=10704386;
 RA Imondi R., Wideman C., Kaprielian Z.;
 RT "Complementary expression of transmembrane ephrins and their receptors
 RT in the mouse spinal cord: a possible role in constraining the
 RT orientation of longitudinally projecting axons.";
 RL Development 127:1397-1410(2000).
 CC -!- FUNCTION: Binds to the receptor tyrosine kinases EPHB1 and EPHA1.
 CC Binds to, and induce the collapse of, commissural axons/growth
 CC cones in vitro. May play a role in constraining the orientation of
 CC longitudinally projecting axons.
 CC -!- SUBCELLULAR LOCATION: Type I membrane protein.
 CC -!- TISSUE SPECIFICITY: Expressed on lateral floor plate cells,
 CC specifically on commissural axon segments that have passed through
 CC the floor plate. Expressed in cells of the retinal ganglion cell
 CC layer during retinal axon guidance to the optic disc.
 CC -!- DEVELOPMENTAL STAGE: Expressed in the floor plate throughout the
 CC period of commissural axon pathfinding.
 CC -!- PTM: Inducible phosphorylation of tyrosine residues in the
 CC cytoplasmic domain.
 CC -!- SIMILARITY: Belongs to the ephrin family.

 CC -!- SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.
 CC -!- TISSUE SPECIFICITY: Expressed in brain, skeletal muscle, spleen,
 CC thymus, prostate, testis, ovary, small intestine, and peripheral
 CC blood leukocytes.

CC -!- SIMILARITY: Belongs to the ephrin family.
